

ABDUL AZIZ

Bengaluru, Karnataka

Phone: 9928918942 Email: abdulaziz99289@gmail.com LinkedIn: [linkedin](#) GitHub: [github](#)  [portfolio](#)

Summary

AI/ML Engineer specializing in agentic AI systems, LLM applications, and computer vision. Experienced in shipping production-grade multi-agent workflows—RAG, advanced prompt engineering, and self-correcting LLM pipelines—and full-stack AI products spanning recruitment automation, conversational business intelligence, and industrial visual inspection. Strong foundation in Python, deep learning, and applied mathematics, with a track record of delivering end-to-end solutions from proof-of-concept to deployment.

Experience

Ekfrazo Technologies

Nov 2025 – Present

AI/ML Engineer

Bengaluru

- Engineered agentic AI systems with LLMs (GPT-4o, Google Gemini) to automate high-impact recruitment and marketing workflows, implementing multi-agent orchestration and self-correcting autonomous pipelines.
- Translated abstract business requirements into scalable, production-ready solutions—including AI HR agents for automated resume screening, candidate-JD matching, and personalized outreach.
- Applied advanced agentic design patterns (RAG, tool-use, structured prompting) to build reliable, low-hallucination LLM workflows for specialized B2B services.

Indus Vision

May 2025 – Sep 2025

AI/ML Intern

Bengaluru

- Designed and developed advanced AI models for visual intelligence tasks—object detection, image segmentation, object tracking, OCR, and anomaly detection.
- Led Proof-of-Concept initiatives to assess feasibility and benchmark model performance, building customized algorithms for specific client requirements.
- Collaborated with cross-functional teams to ensure seamless execution and timely delivery of computer-vision solutions.

Freelance AI Developer

May 2024 – May 2025

AI & Automation Consultant

Remote

- Built custom AI agents for e-commerce and brand-marketing operations, automating lead qualification, follow-ups, and customer engagement across the funnel.
- Designed and deployed end-to-end lead-tracking workflows (capture → enrich → score → automated follow-up), integrating LLMs with CRM and automation tools (n8n).
- Developed responsive marketing websites with AI-powered conversational front-ends connected to automated back-ends for 24/7 inbound lead handling.
- Delivered Shopify-focused automation for product, campaign, and customer-communication workflows, reducing manual effort for small D2C brands by [X]%.

Consta Cloud

Apr 2023 – May 2023

SDE Intern

Remote

- Developed and optimized scalable web-application features using HTML, CSS, Python, and Django to enhance user engagement.
- Worked in an Agile environment, contributing to code reviews, debugging, and API integration.
- Collaborated with cross-functional teams to improve frontend performance, backend logic, and database management.

Projects

TalentFlow AI | Intelligent HRMS Platform — Node.js, React, LLMs, n8n

- Architected a full-stack, AI-native HRMS (Node.js + React) covering the end-to-end recruitment lifecycle—sourcing, screening, interview coordination, and onboarding.
- Built autonomous AI agents that automate resume screening and candidate-JD matching with compatibility scoring and justifications, scaling recruiter throughput.
- Implemented email-automation and personalized-outreach agents, plus auto-generated, self-maintaining candidate trackers that eliminate repetitive manual operations.
- Orchestrated multi-agent, human-in-the-loop hiring pipelines with LLM reasoning and self-correction for reliable, explainable decisions.

InsightIQ | Conversational BI Platform — Node.js, DuckDB, LLMs, Apache ECharts

- Built a conversational analytics platform that converts plain-English (typed or spoken) questions into verified, accurate answers in under 2 seconds across multiple data sources.
- Designed a 4-layer pipeline—intent decode → SQL generation → sandboxed DuckDB execution → LLM narration—ensuring mathematically exact, low-hallucination results.

- Integrated multi-source connectors (CSV/Excel, AWS S3, BigQuery, Snowflake, Databricks) into a unified in-memory DuckDB workspace with auto-detected cross-table joins.
- Added a Web Speech API voice interface, auto-generated ECharts dashboards, and self-correcting query retries for production robustness.

Automated Door Defect Inspection System | *Ashok Leyland* — Python, YOLOv8, OpenCV

- Developed a deep-learning inspection system detecting truck-door defects (dents, rust, hole/door mismatches, incorrect hole counts) in real time.
- Trained 4 specialized YOLOv8 models combining object detection and segmentation with OpenCV for precise defect localization and labeling.
- Delivered a high-accuracy industrial Proof-of-Concept validated for reliability on a manufacturing-floor setting.

Technical Skills

AI / ML: Python, PyTorch, Scikit-learn, Retrieval-Augmented Generation (RAG), Agentic AI & Automation, Advanced Prompt Engineering, LangChain (Familiar), n8n, Google AI Studio

Data & Analytics: Pandas, NumPy, SQL, Matplotlib & Seaborn, Exploratory Data Analysis, Data Visualization; Data Engineering & Databricks (Familiar)

Full-Stack & Databases: HTML/CSS, JavaScript, React (Familiar), Node.js (Familiar); MySQL, Oracle, SQLite; Git & GitHub

AI Tools & Productivity: Claude, Google Gemini (Live/Canvas/Video), OpenAI/ChatGPT, Perplexity, ElevenLabs, RunwayML, Midjourney, Canva; Prototyping with Google AI Studio & Stitch

Domain Knowledge: IT Recruitment, E-commerce (Shopify), Digital Marketing Automation

Interpersonal Skills

- | | | |
|-------------------|---------------------|----------------------|
| • Problem solving | • Creativity | • Adaptability |
| • Time management | • Critical thinking | • Team collaboration |

Certificates

- Software Testing (IIIT Bangalore / NPTEL)
- Business Intelligence and Data Analytics: Generate Insights (Macquarie University / Coursera)
- Data Science Professional using R (Infosys—Springboard)
- Introduction to H2O using Python (Infosys—Springboard)
